Course, Year & Section: BSIT 4 – 1

Student Number: 202304188
Date: 9 / 14 / 2026

ONLINE ACTIVITY #2
Personalized Linux, and Git Cheat Sheet

Using any available resources (official Git documentation, online tutorials, or the built-in git --help command), research the following topics and create a personalized 1-page (A4) cheat sheet:

1. Basic Linux commands (command, sample usage) (at least 10)

pwd Shows the absolute path of wherever I currently am.	mv Renames a file, or relocates it if the target path differs.
cd Changes my current working directory.	less Opens a file for scrollable viewing without loading it all at once.
mkdir -p Makes a folder, and with -p it creates any missing parent folders too.	find Searches a directory tree for files matching a pattern.
rm -rf Force-deletes a folder and its contents. No confirmation, no recovery.	chown Changes which user/group owns a file.
cp -r Copies a whole folder recursively.	df -h Shows disk space usage in human-readable units (GB/MB).

2. Basic Git commands (command, sample usage, description (use your own wordings), common options/flags)

Command	Sample Usage	Description	Common Flags
git init	git init my-app	Sets up a brand-new, empty Git repository in this folder	(none)
git status	git status	Tells me what's staged, changed, or untracked at this moment	-s
git add	git add .	Stages changes so they'll be included in the next commit	-p
git commit	git commit -m "add login"	Records the staged snapshot permanently in the project history	--amend
git log	git log --graph --oneline	Displays the commit history, one entry per line	--graph

git diff	git diff --staged	Compares versions of files to show exactly what changed	HEAD~1
git restore	git restore --staged f.txt	Reverts working files or unstages changes	--staged
git branch	git branch -a	Creates new branches, or lists all of them	-d
git checkout/switch	git checkout -b bugfix	Switches between branches or commits	-b
git merge	git merge bugfix	Combines the history of one branch into the current branch	--squash
git tag	git tag -a v2.0 -m "release"	Labels a specific commit, usually for a release version	-d
git clone	git clone --depth 1 <url>	Copies a remote repo (and its history) onto my machine	--depth

3. the three-tree architecture of Git

You are free to use any design or color scheme, just make sure it is readable.

Submission:

1. Use PDF as the file format for your cheat sheet.
2. Upload it to your GitHub repository
3. Submit the link here: <https://drive.google.com/drive/folders/1-Y6e6E6PoLyGgB0WZ8prRCNfolpV3cj0?usp=sharing>

Reminders:

Please put a "Reference" section in the cheat sheet for the materials you cited.

Pro Git book (free online) - <https://git-scm.com/book>

Linux man pages (accessed via `man` in terminal)

GitHub Docs - <https://docs.github.com>

I **DO NOT PROHIBIT** the use of AI for this activity, but please declare the extent of the use.

Sample:

*"The author used **[Tool Name, Version]** to **[specific task]** during assignment preparation. The author reviewed and edited the content as needed and takes full responsibility for the final content of the work."*

Or

"I have not used any AI or AI-assisted technologies to prepare this work."
